-I-FUNCTION: MEDIATES THE ENDOCYTOSIS OF GLYCOPROTEINS BY MACROPHAGES. IN SEVERAL RECOGNITION AND UPTAKE PROCESSES.

-I-SUBCELLULAR LOCATION: Type I membrane protein.

-I-MISCELLANEOUS: CRDS 1-3 HAVE AT MOST VERY WEAK AFFINITY FOR CARBOHYDRATE. CRD 4 SHOWS THE HIGHEST AFFINITY BINDING AND HAS MULTISPECIFICITY FOR A VARIETY OF MONOSACCHARIDES. AT LEAST 3 CRDS (4, 5, AND 7) ARE REQUIRED FOR HIGH AFFINITY BINDING AND RNDOCYTOSIS OF MULTIVALENT GLYCOCONJUGATES.

-I-SIMILARITY: CONCAINS 8 C-type lectin family domains.

-I-SIMILARITY: Concains 1 ricin B-type lectin domain.

-I-DATABASE: NAME=PROW; NOTE=PROW 2:85-89(2001);

Biophys. Acta 1075:248-258(1991).
-!- FUNCTION: May play a role in intercellular signaling and in connecting cells with the extracellular matrix. May take part in the regulation of cell motility, growth and differentiation. Binds hyaluronic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  IsoId=P81282-4; Sequence=VSP 003078, VSP 003081;
TISSUE SPECIFICITY: Cerebral white matter. V0 and V1 are expressed in the central nervous system, and in a number of mesenchymal and epithelial tissues; the major isoform v2 is restricted to the central nervous system.

DEVELOPMENTAL STAGE: Disappears after the cartilage development
                                                                                                                                                                                                    AND 342-348.

                   SEQUENCE OF 2535-2738 FROM N.A.
STRAIN=Sprague-Dawley; TISSUE=Lung;
Blomberg L.A., Chan W.-Y., Clerch L., Massaro D.;
Blomberg L.A., Chan W.-Y., Clerch L., Massaro D.;
"Molecular cloning and characterization of two developmentally regulated genes in rat lung.";
Submitted (SEP-2000) to the EMBL/GenBank/DDBJ databases.
-: FUNCTION: May play a role in intercellular signaling and in connecting cells with the extracellular matrix. May take part in the regulation of cell motility, growth and differentiation. Binds hyaluronic acid.
-: SUBUNIT: Interacts with FBLNI (By similarity).
-: SUBCELLULAR LOCATION: Secreted; extracellular matrix.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (By similarity).

SIMILARITY: Contains 1 immunoglobulin-like V-type domain.

SIMILARITY: Contains 2 Eirlik domains.

SIMILARITY: Contains 2 Egr-like domains.

SIMILARITY: Contains 1 C-type lectin family domain.

SIMILARITY: Contains 1 Sushi (SCR) domain.

SIMILARITY: BELONGS TO THE AGGRECAN/VERSICAN PROTEOGLYCAN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Isoid=09ERB4-1; Sequence=VSP 001092;
TISSUE SPECIFICITY: In kidney is expressed in the papillary area, but not in glomeruli.
DEVELOPMENTAL STAGE: Disappears after the cartilage development
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Glycoprotein; Proteoglycan; Lectin; Extracellular matrix; Sushi;
                                                                                                                                                                                                                                                                                                                                                                              Event=Alternative splicing; Named isoforms=3;
Comment=Additional isoforms seem to exist;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  IsoId=Q9ERB4-2; Sequence=VSP_003091;

Shinomura T., Nishida Y., Ito K., Kimata K.;
"CDNA cloning of PG-M, a large chondroitin sulfate proteoglycan expressed during chondrogenesis in chick limb buds. Alternative spliced multiforms of PG-M and their relationships to versican.";
J. Biol. Chem. 268:14461-14469(1993).
-: FUNCTION: May play a role in intercellular signaling and in connecting cells with the extracellular matrix. May take part in the regulation of cell motility, growth and differentiation. Binds hyaluronic acid.
                                 Gallus gallus (Chicken).

T lectin-like receptor with Structural homology to thrombomodulin.";

T lectin-like receptor with Structural homology to thrombomodulin.";

L. Misol. Chem. 275:34382-34392 (2000).

-!- FUNCTION: Receptor (or element of a larger receptor complex) for Clq, mannose-binding lectin (MBL2) and pulmonary surfactant protein A (SPA). May mediate the enhancement of phagocytosis in monocytes and marchages upon interaction with solubbe defense collagens. May play a role in interactilular adhesion.

-!- SUBCELLULAR LOCATION: Type I membrane protein.

-!- TISSUE SPECIFICITY: Widely expressed. Highly expressed in lung and heart. Expressed at lower level in brain, thymus, liver, spleen, intestine, kidney, adrenal gland, muscle and testis. Expressed on endothelial cells, platelets, undifferentiated monocytes and circulating natural killer cells.

-!- FTIM. N - and O-glycosylated (By similarity).

-!- SIMILARITY: Contains 1 C-type lectin family domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This SWISS-PROT entry is copyright. BIOL. Chem. 268:17377-17383(1993).

-1- FUNCTION: THIS PROTEOGLYCAN IS A MAJOR COMPONENT OF EXTRACELLULAR MATRIX OF CARTILAGERNOUS TISSUES. A MAJOR FUNCTION OF THIS PROTEIN IS TO RESIST COMPRESSION IN CARTILAGE. IT BINDS AVIDLY TO HYALURONIC ACID VIA AN AMINO-TERMINAL GLOBULAR REGION. MAY PLAY A REGIGLATORY ROLE IN THE MATRIX ASSEMBLY OF THE CARTILAGE.

-1- SUBCELLULAR LOCATION: Secreted; extracellular matrix (By similarity).

-1- DOMAIN: TWO GLOBULAR DOWAINS, G1 AND G2, COMPRISE THE AMINO TERMINUS OF THE PROTEOGLYCAN, WHILE ANOTHER GLOBULAR REGION, G3, MAKES UP THE COOH TERMINUS. G1 CONTAINS LINK DOMAINS AND THUS CONSISTS OF THREE DISULFIDE-BONDED LOOP STRUCTURES DESIGNATED AS THE A, B, B, MOTIFE. G2 IS SIMILAR TO G1. THE KERATAN SULFATE (KS)
                                                                                                                                                                                                                                                       9 QPVCRGG---TORPCYKVIYFHDTSRRLNFEEAKEACRRDGGQLVSIESEDEQKLIEKFI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 15

chondroitin sulfate proteoglycan PG-M core protein - chicken
C;Species: Gallus gallus (chicken)
C;Date: 21-Sep-1993 #sequence_revision 18-Nov-1994 #text_change 21-Jul-2000
C;Accssion: A47171
R;Shinomura, T; Nishida, Y; Ito, K; Kimata, K.
J. Biol. Chem. 268, 14461-14469, 1993
A;Title: cDNA cloning of PG-M, a large chondroitin sulfate proteoglycan expressed during
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NCBIP:134457)
